

Squish — Privacy Policy

Last updated: 17-Jul-2026

Squish is a Mac app for compressing and converting your media files. Your privacy is simple to explain: Squish does not collect, store, transmit, or share any personal data.

What Squish does with your files

All processing — video compression, audio extraction, image conversion, and background removal — happens entirely on your device. Your files are never uploaded to any server. They never leave your Mac.

Data we collect

None. Squish has no account system, no analytics, no tracking, and no advertising. We do not collect usage data, personal information, or file contents.

Purchases

Squish offers a one-time Premium upgrade through Apple's In-App Purchase system. Payments are handled entirely by Apple; we never see or store your payment details. Apple's handling of that transaction is governed by Apple's own privacy policy.

Third parties

Squish does not include third-party analytics, advertising, or tracking SDKs.
